Dear Federal Communications Commission,

I am writing to express my strong opposition to NextNav's Petition for Rulemaking to reconfigure the lower 900 MHz band and adopt new rules that would negatively impact the use of Part 15 RAIN RFID technology. Following the activities on WT Docket No. 24-240 I share the concerns raised by RAIN Alliance Inc. Filing 10906412205140 (<https://www.fcc.gov/ecfs/search/search-filings/filing/10906412205140>).

As a user of RAIN RFID, I rely on this technology for critical applications such as [briefly describe your use case, e.g., inventory management, supply chain efficiency, patient safety in healthcare, etc.]. The proposed changes by NextNav, including increased power levels and the removal of existing protections for Part 15 devices, would cause significant interference and disrupt the vital services RAIN RFID provides.

RAIN RFID is an essential tool that supports not only my operations but also the broader economy and public safety. The proposed changes would jeopardize these benefits and create unnecessary disruptions, costs, and risks.

I urge the FCC to deny NextNav's petition and protect the current use of the 902-928 MHz band for Part 15 RAIN RFID devices.

Thank you for considering my comments.

Yours sincerely,
For and on behalf of
SML Intelligent Inventory Solutions, LLC.
